JOHANN HALLGRIMSSON

SENIOR FULL-STACK SOFTWARE DEVELOPER

Reykjavík, Iceland • +354 611 4748
joh@mi.is • johannhallgrimss.github.io/cv-site/

PROFESSIONAL PROFILE

Senior full-stack software developer with extensive experience designing, building and maintaining scalable .NET applications, business systems, integrations and web solutions. Strong background in backend development, REST API design, database development, document workflows, identity and access integrations, and production systems. Experienced across the full software lifecycle, from internal tools and enterprise platforms to high-volume messaging infrastructure. Particularly interested in artificial intelligence, automation and practical, intelligent software solutions. Completed four courses focused on AI design and programming, with an emphasis on Claude.

CORE TECHNICAL SKILLS

Languages & Web C#, JavaScript, TypeScript, HTML, CSS, X++, Java/JSP	**.NET & Application Development** .NET Core, ASP.NET, MVC.NET, Entity Framework, WinForms, WebForms
Frontend Angular, React, HTML/CSS, TypeScript, JavaScript, jQuery	**Databases** Microsoft SQL Server, PostgreSQL, SQL scripting
APIs & Integrations REST APIs, Microsoft Graph API, Google Cloud APIs, Google Translate API, web services	**Platforms & Infrastructure** Azure AD / Active Directory, IIS, Windows and Linux servers, Mono, FTP/SFTP workflows
Enterprise Systems Dynamics AX, NAV/AX integrations, SAP, SharePoint, Teams, Outlook, OpenText Content Server	**Methods** Agile, Scrum, system administration, troubleshooting, production support

PROFESSIONAL EXPERIENCE

CEO / Software Developer | Huxun

2025–2026

- Worked on the development of a survey platform and related supporting systems used by companies to measure employee satisfaction.
- Contributed to a time-limited project.
- Developed an Agile frontend and a .NET Core backend, using PostgreSQL and Entity Framework.

Software Developer | One Systems Ísland ehf. 2017–2025

- Developed a CRM system and associated applications used by most municipalities in Iceland, as well as by several public institutions and other companies.
- Implemented website sign-in using Auðkenni and island.is identity services.
- Built PDF document-signing workflows using Auðkenni.
- Integrated with the island.is mailbox to send messages and submit or process documents.
- Used Microsoft Graph API to retrieve and work with data from Microsoft Teams, Outlook, SharePoint and other Microsoft services.
- Integrated Google Translate API to support translation workflows.
- Used the Aspose framework for document processing and format conversion.
- Developed integrations with NAV and AX systems through web services.
- Prepared archival submission packages for the National Archives of Iceland.
- Implemented online payment solutions for user payments.
- Delivered additional general-purpose and custom-built software features and integrations.

Software Developer | LS Retail 2015–2017

- Developed POS (point-of-sale) software, including LSFirst, a C# WinForms application, and a newer MPOS solution built as an HTML/TypeScript Metro app.
- Worked on backend programming in Dynamics AX and supported the operation of related systems.
- Contributed to a major POS implementation for AAFES, part of the United States military, in collaboration with Microsoft.
- Developed MPOS functionality for Jet fuel stations in Europe and Cracker Barrel, a restaurant chain in the United States.
- Worked on an insurance system implemented in Dynamics AX using X++, and an MVC.NET website using authentication through Íslandslykill.
- The website retrieved content directly from AX and saved it using an RTS service.

Software Developer | Five Degrees ehf. 2014–2015

- Developed both a WinForms client for a banking backend and the web version of the client.
- Worked in an MVC and .NET environment, primarily on web frontend interfaces, while also contributing to middleware and database development.

PROFESSIONAL EXPERIENCE — CONTINUED

Software Developer / Systems Support | Íslandspóstur (Iceland Post) 2011–2014

- Developed internal .NET tools using C# WinForms and WebForms, JavaScript, jQuery, web services, Java/JSP and Microsoft SQL Server.
- Assisted with development of the main Iceland Post website, primarily using CXXL and Umbraco content-management systems.
- Administered several third-party and open-source websites and systems, including actiTIME and OpenText Content Server, as well as IIS and Windows and Linux servers.
- Designed a database containing postal addresses across Iceland and built web tools to create, update and manage records in that database.
- Developed employee tools for operational tasks, including payroll-data verification that required Active Directory access controls.
- Built tools enabling station managers to modify mail-carrier routes.
- Built tools for station managers to register mail items in SAP where SAP functionality was unavailable.
- Developed a quality handbook solution that used web services connected to Livelink document servers.
- Designed and programmed a tool that scanned invoices and imported them into the SAP accounting system.
- Built a tool for scanning public mail for the ePost (Mappan) service. It read barcodes printed on envelopes by sorting machinery to identify the correct recipient, scanned the recipient's letters, compressed them into ZIP files and sent them securely to an FTP server.
- Developed a tool to receive invoices and payment slips from ePost and apply barcode or OMR markings so the packing machine could place the correct paper documents together in the same envelope after printing.

Software Developer / Systems Engineer | Leto ehf. 2009–2011

- Developed a social networking website with approximately 20 million users using .NET, C# and ASPX.
- Created administrative tools and supporting utilities for the website, mainly in .NET, including web applications, console utilities and WinForms applications.
- Developed a Mono application on Linux to send approximately 4–10 million emails per day.
- Wrote SQL scripts used by the application for Microsoft SQL Server 2008.
- Maintained four Microsoft web servers and several Linux mail servers.
- Built a WinForms mail application that fed messages to Linux-based services and used eight threads to send email to website users.
- Developed logic to determine appropriate sending volumes for each of eight SMTP servers and the eight IP addresses used by each server.
- Implemented a Linux server application that read mail queues and sent queue information to the mail client, which evaluated parameters and rules to distribute volume across SMTP servers. This was designed to account for Microsoft mail-server anti-spam rules that could flag sending spikes from particular servers.

IT Support Technician / Systems Support | Miðnet 2004–2006

- Repaired computers, maintained computer systems and provided technical assistance to users.
- Participated in an on-call support rotation starting at 8:00 a.m.; regular working hours were mainly from 2:00 p.m., in a role equivalent to approximately 50–70% employment.
- The company was sold in November 2006, after which I entered full-time study at Reykjavík University.

EDUCATION

2009	**B.Sc. in Computer Science** Reykjavík University
2007	**Systems Analysis / Systems Science** Reykjavík University
2003	**Diplomas / Certifications in Microsoft Technologies** MCP (Microsoft Certified Professional), MCSA (Microsoft Certified Systems Administrator), MCSE (Microsoft Certified Systems Engineer) — Nýi Tölvu- og viðskiptaskólinn

2001	**Upper Secondary School Graduation** Fjölbrautaskólinn í Breiðholti

ARTIFICIAL INTELLIGENCE TRAINING

Four courses completed in AI design and programming, with an emphasis on Claude. This training complements a broader interest in applying AI, automation and intelligent workflows to practical software-development challenges.
